Frontend Developer

About us

coralbay.tv is a small software company that builds play to air systems for the TV Broadcast & Media Industry. Our software has a real-time element and is built to be distributed, cloud native and agnostic (we can run in AWS, Azure, Google, etc), with the option of running on premises. We run on Kubernetes, on Docker and we use various open source tools, such as Kibana, Grafana, etc, for monitoring and deployment.

We are currently looking for a talented, graduate Frontend Developer to join our growing development team. You'll be working on our main web application UI, using the latest Angular framework and interfacing with our REST and Websocket based APIs. You'll have the opportunity to help design and develop UI components for new product features, to grow with the company and to help shape our software development processes.

Required Skills

- Excellent problem solving
- Excellent communication
- Solid understanding of Web Technologies (HTTP, REST, Websockets, etc)
- Good knowledge of HTML, Javascript & CSS.

Desired Skills

- Angular
- Typescript
- nodejs and Express
- Build tools (npm, gulp, etc)
- Kubernetes & Docker
- Git
